CASE STUDY

# Digital Procurement for Branded Signage

*How a single platform replaced spreadsheets, emails and manual coordination for Balfour Beatty*

BALFOUR BEATTY

**Onesign and Digital**

01

# The Challenge

For large construction firms managing branded signage across hundreds of active sites, procurement is often more complex than it needs to be. Requirements arrive via spreadsheets, brand guidelines live in separate documents, and procurement teams spend hours reconciling requests.

- Limited visibility of what is ordered across sites
- Inconsistent brand application without visual references
- Version control issues with shared spreadsheets
- Manual administration for every order
- Extended lead times from clarification cycles

## The Solution

Working with Balfour Beatty, we built a branded digital procurement portal. Site managers browse approved signage with images, select variants, and submit orders directly. Procurement teams get structured data, full visibility, and a single source of truth.

> One platform. Visual product selection. Structured ordering. Complete visibility from site to sign.

Procurement processes that work – but consume far more time and coordination than they should.

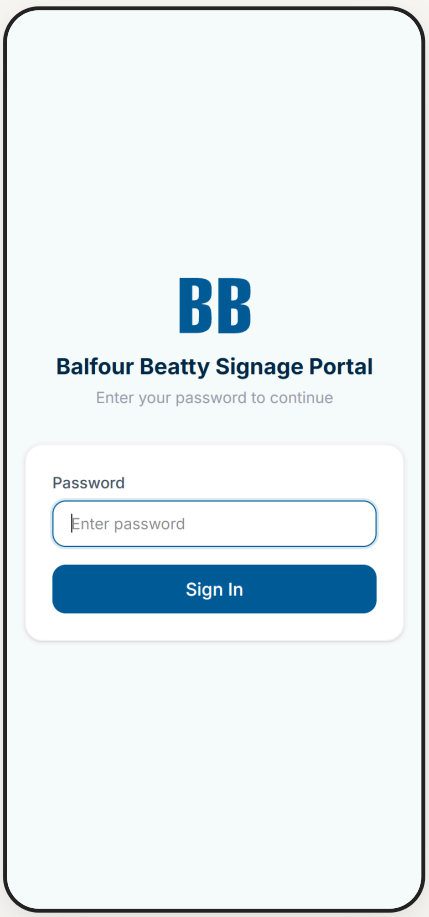
# The Platform

02

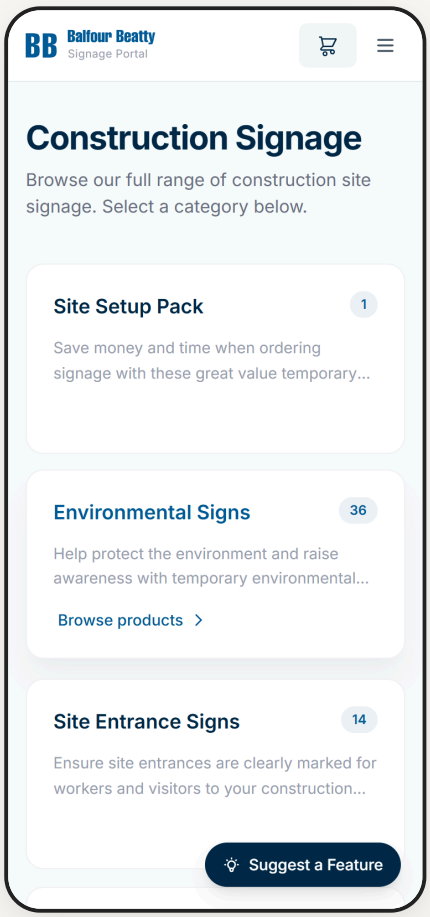
The Balfour Beatty Signage Portal replaces fragmented workflows with a single digital ordering experience.

## Secure Access & Category Browsing

Site managers log in through a branded entry point. On login, they see all available signage categories – Site Setup Packs, Environmental Signs, Health & Safety, and more.



*Branded login screen*

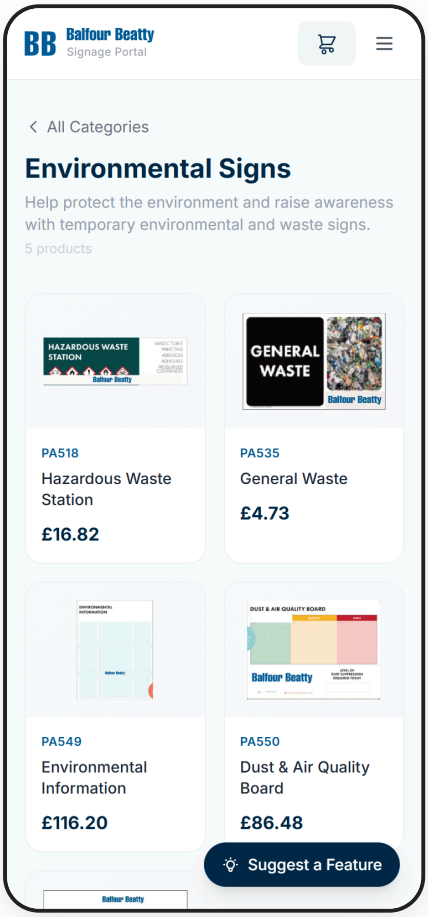


*Category overview*

# Visual Product Catalog

03

Products are displayed with images, codes, names, and pricing. Each product page shows all available size and material variants with clear pricing. No more guessing from text descriptions.



*Product grid with images and pricing*

*Variant selection with preview*

# The Ordering Experience

04

## Basket & Checkout

Selected items are summarised in a basket with images, quantities, and a full pricing breakdown including VAT.

At checkout, users select a contact, delivery site, and optional purchaser from saved records. A PO number and special instructions can be attached.

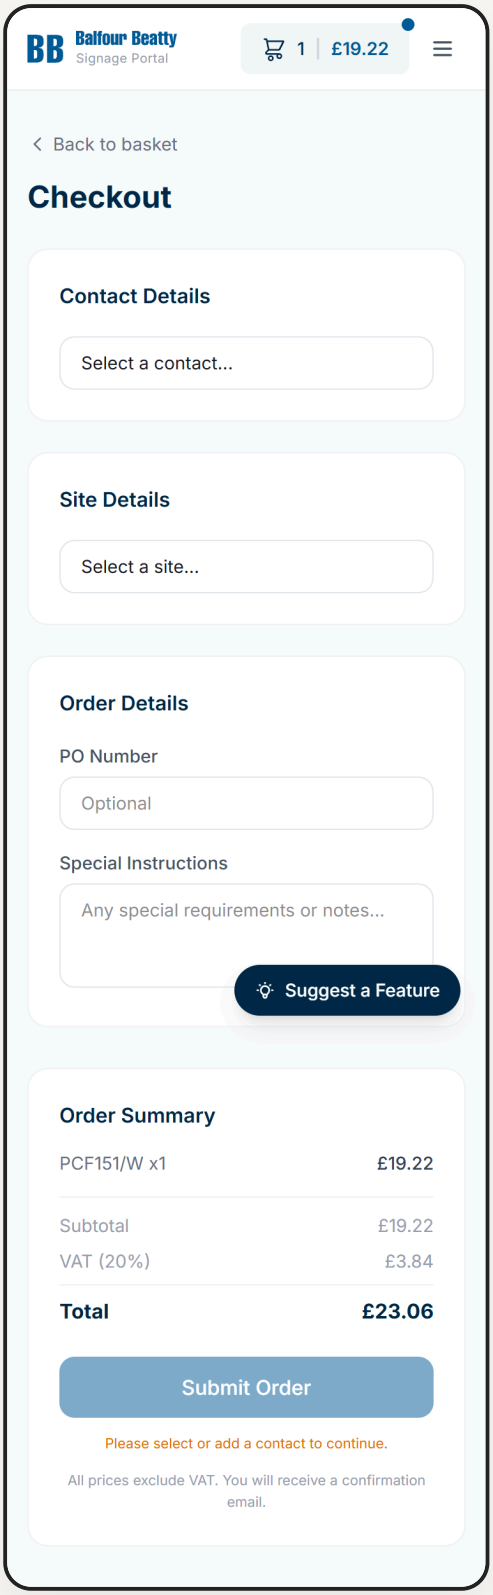
Previously saved contacts and sites make repeat ordering fast.

## Structured Data

Every order captures:

- Contact and site details
- Product codes and quantities
- PO reference
- Special instructions

Clean, actionable data replaces ambiguous email requests.

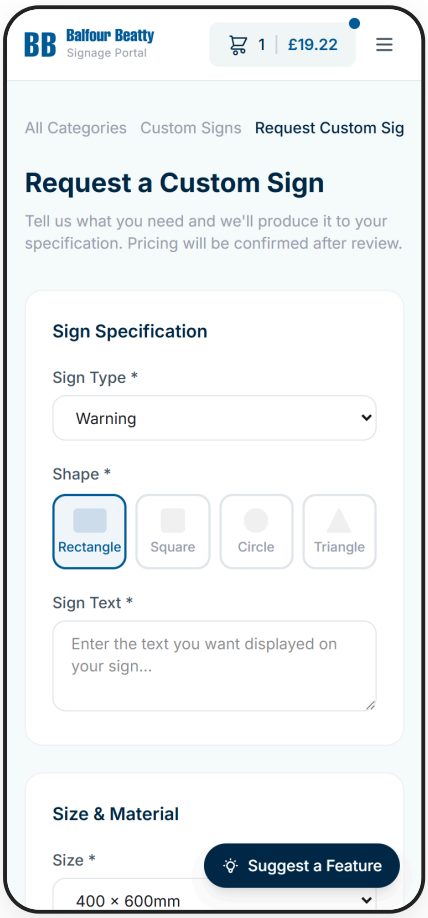


*Complete checkout flow*

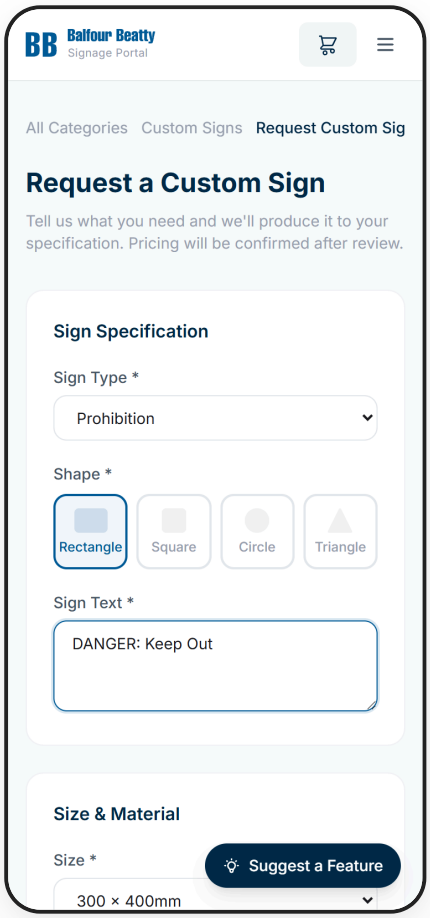
# Custom Sign Builder

05

For bespoke requirements, users specify sign type, shape, size, material, and text. A live preview renders the sign in real time. Custom signs are submitted as quote requests – the team reviews and confirms pricing before manufacture.



*Sign specification form*

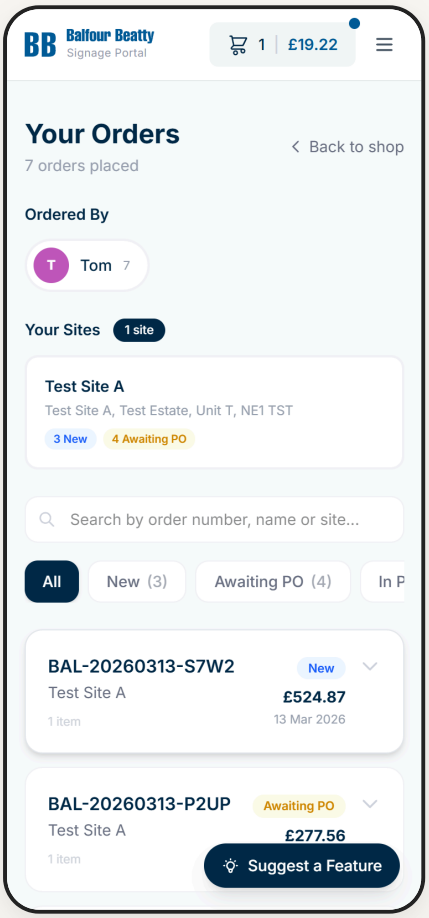


*Live preview with size & material options*

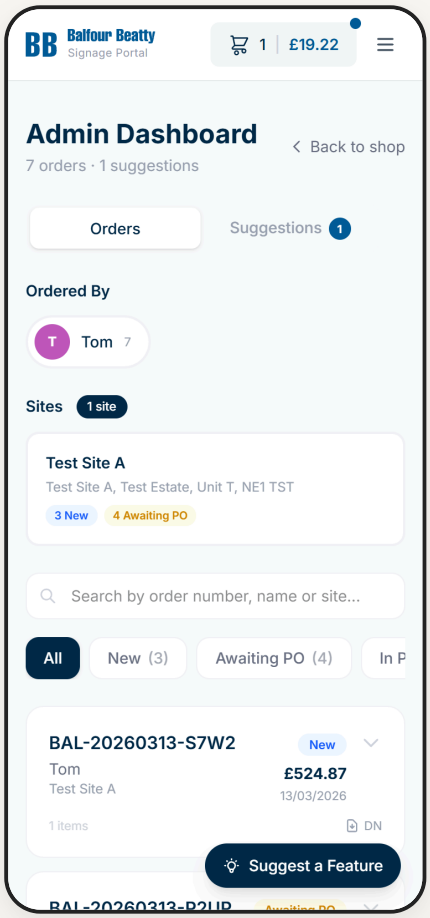
# Visibility & Control

06

Both site managers and the production team get complete order visibility. Users track progress without chasing updates. The admin dashboard gives the production team a single view of all orders across the estate.



*Order tracking with filters and status*



*Admin dashboard for order management*

## The Results

07

By replacing manual processes with a structured digital workflow, the portal delivers measurable improvements across procurement, operations, and brand management.

### Faster Ordering

Site managers browse and order in minutes, not days

### Brand Consistency

Every order uses approved, visually referenced products

### Complete Visibility

Full oversight of every order across every site

### Structured Data

Clean order data replaces ambiguous email requests

### Reduced Admin

No more manual reconciliation of spreadsheets

### Scalable

The same platform serves five sites or five hundred

> From site manager to delivered signage: one digital workflow replacing spreadsheets, emails, and manual coordination.

## Get in Touch

If you'd like to explore how a digital procurement portal could simplify signage ordering across your estate, we'd be happy to show you how it works.
